- Compatible with just about every accounting system out there
- FlexChek is compatible with Microsoft Operating Systems
- Password protection for security applications
- FlexChek check writing software is CPA Compliant for Canada

FLEXCHEK is business check printing made fast, simple and affordable.

Relyco's FLEXCHEK software is compatible with any accounting system; including QuickBooks check printing and Peachtree for fast, easy, and affordable check printing.

FLEXCHEK is business check printing made simple. When you print checks out from your accounting software, rather than choosing a printer you select the FLEXCHEK option. The check data is processed through FLEXCHEK and with a few clicks the output on your laser printer is a batch of live checks.

FLEXCHEK has the capability of printing logos and graphics, signatures, the MICR line and check number as well as any other static text/print. It allows you to print everything onto blank check stock paper eliminating the need for pre-printed checks. You will only need a MICR toner cartridge for your laser printer.

The FLEXCHEK check printing program can handle an unlimited number of bank accounts or companies. You can process these checks in one pass or separately to capture unique MICR lines, logos and signatures. The check printing software has the option for a secure password to ensure that only authorized users print checks.

FLEXCHEK Secure Check Printing

Double Layered Password protection is available. This not only blocks someone from printing a check, but the additional level of password protection can be set to block anyone from interfering with the layout of the check

You can store necessary signatures on a Secure USB key that Relyco can provide. The only way a check can be signed is if the USB key has been inserted into the computer.

FLEXCHEK Works with Your Accounting System

Relyco has many QuickBooks and Peachtree users who have successfully eliminated the cost and aggravation of pre-printed checks. The software is downloaded off of the Internet so the implementation is fast and easy.

Almost all accounting software systems are compatible with Relyco check printing software. As long as your system can produce a text or delimited file (i.e., comma separated file), Relyco's flexible data mapping tools will allow us to map and print your data with our check printing software
