

PlanetPress 3

Join the revolution. **Intelligent Forms.**

Business Forms

Industrial Graphics

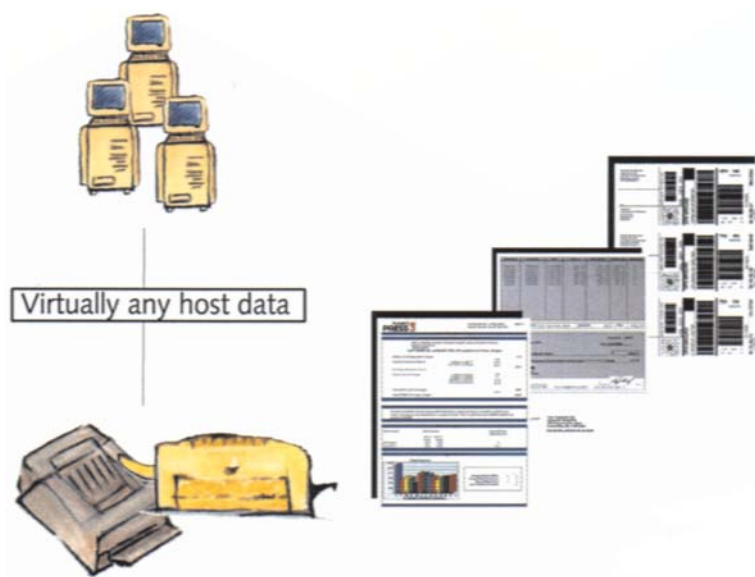

Variable Data Printing

Output Management

Relyco, together with Objectif Lune's family of output management products makes moving from preprinted impact printer applications to laser printed forms simple and cost effective.

Documents including business forms, mailing pieces, insurance forms and industrial labeling applications can be developed with ease. Such documents can then be integrated with variable data coming from most host computers.

- Multi-Part Business Forms
- Statements And Billing Applications
- High-Speed Mail Merge
- One To One Marketing Documents
- Variable Data Document Printing
- Bar Code Printing
- Laser Label Applications
- MICR Check Printing
- Grey Bar Reports
- Insurance/Financial Documents

Import Text, Graphics And Photos (Bitmaps)

Graphic conversion utility imports EPS/BMP/JPEG/PDF files with full color support. Level compression enables multiplr full-page bitmaps in the same form. Bitmaps can be rotated, re-sampled, and cropped directly in PlanetPress. Images can be conditionally printed producing dynamic documents.

Bar Codes

The Barcode Wizard supports industry standard bar codes including PDF-417. For bar codes such as EAN128, start, stop and checksum digits can be automatically created without modification to the host print files. Data in bar codes can be concatenated, again simplifying application development.

Fonts

True Type and PostScript Type 1 support. Character remapping wizard. International character support including double byte for the CJK (Chinese, Japanese and Korean) market.

Conditions

Any element of a PlanetPress Intelligent Form can be conditionally placed or printed based on the information in the variable data print stream, enabling documents to be dynamic, changing from page to page. PlanetPress also supports line conditions, changing for example the font color of a line based on any information in that line. PlanetPressTalk supports even more complicated conditions, making a document's dynamic nature almost endless.

Color

Color is supported for all elements of a PlanetPress Intelligent Form including full color bitmap images. Color can even be conditionally selected, enabling the printing of negative numbers in red for example.

Paragraph Formatting

The built-in word processor allows full paragraph formatting with variable data insertion. Paragraphs can be justified left, right, center and block. Inserted variable data is dynamically integrated, within the format restraints of the paragraph, to produce sophisticated seamless documents. With the help of PlanetPressTalk, inserted variable data can be from the original source data or be calculated fields, creating endless possibilities.

PlanetPress Shaper

A simple drawing tool allows creation of logos and special shapes. Images created using this tool produce efficient Intelligent Forms.

Business Graphs

The Business Graph Wizard makes it easy to create pie, bar and line graphs from variable print data and incorporate them into an Intelligent Form. Many aspects of the graphs can be controlled such as 3D, bar width, spacing and color.

System Requirements: PlanetPress Printer: PostScript Level 2 or 3, Adobe compliant, PostScript Level 2 Image Caching, Page Printer, 16MB RAM / 48MB recommended, HDD or FLASH supporting PostScript file system recommended.
PlanetPress Suite: Pentium II, Windows 95/98/NT4/2000, 32MB RAM, 100MB HDD
